3: About this reference
4: running as a script (in REPL*)
5: comments
6: ; print NSLog assert @#available import @testable
7: ~= ... ..< &+ ??
8: operators(2): precedence
9: simple declarations
10: types, typealias
11: type conversion, bridged types
12: optionals
13: unwrapping optionals with let
14: literals
15: String
16: String Indexing
17: arrays, [i] []
18: Set, [v]
19: dictionaries [k:v] [:]
20: tuples
21: struct/class basics
22: value vs. reference objects
23: optional chaining: ?. ?[x]
24: enum(1)
25: enum(2): associated values
26: enum(3): rawValue
27: enum(4): initializers
28: mutating, self= (in struct)
29: mutating, self= (in enum)
30: repeat, while, if, else, for
31: labels
32: switch(1)
33: switch(2): tuples, value bindings, where
34: pattern matching, wildcards (_), tuples
35: pattern matching and enum
36: pattern matching and optionals
37: pattern matching and flow control
38: assert, precondition, etc.
39: ErrorType, throws, throw
40: defer, guard, do/catch, gen, try!
41: basic functions
42: internal/external argument names
43: default argument values
44: variadic parameters (...)
45: inout
46: function types, nesting
47: closures
48: OO vs. functional approaches
49: captures
50: dynamic initialization
51: curried functions (1): f(x)(y)
52: curried functions(2)
53: filter, map, reduce
54: @autoclosure, @noescape
55: computed properties
56: property observers
57: subclassing, overriding
58: initialization(1)
59: destruction (deinit)
60: initialization(2): delegation
61: initialization(3): phases, using self
62: initialization(4): circular references
63: initialization(5): ↴200\234failable↳200\235
64: initialization(6): required, in protocols
65: access privileges(1)
66: access privileges(2)
67: type casting: is, as!, as?, AnyObject
68: Any
69: generics
70: extension(1)
71: extension examples
```

```
72: exact equivalence, === self
73: ARC
74: weak references
75: unowned references
76: capture lists, self in closure
77: basic protocols
78: @objc
79: optional protocol members
80: protocols and is, as, as!, as?
81: class protocols, implicit adoption
82: associated types: typealias, generic protocols
83: protocol extensions
84: subscripts, [â\200;]
85: extending String: str[1â\200;5], Range<T>
86: Matrix, m[i,j]
87: operator overloading(1)
88: operator overloading(2): in protocols
89: custom matching in switch, ~=
90: sequences: for e in list
91: dictionary keys: Hashable
92: Comparable, Equatable
93: CustomStringConvertible â\200!LiteralConvertible =10 ="s" \ (x)
94: ArrayLiteralConvertible =[â\200;]
95: DictionaryLiteralConvertible =[â\200!:â\200;]
96: misc. other â\200!Convertible
97: what is an optional, really? NilLiteralConvertible
98: what is an optional(2) Equatable
99: SWIFT
